

## Conclusions

- Is unemployment correlated with crime rate?
  - We found that there was a strong correlation between Unemployment Rate and Crime-rate; but change in unemployment does not completely explain a change in crime rate.

- 
- Is there a third variable that is responsible for crime rate?
  - We found that once we accounted for the locality, there was a stronger correlation between unemployment and crime rates.

- 
- Does size of county have an effect on crime rate?
  - We found that this does not seem to have any effect on crime rate. The outcome seems to have no relation at all.
